EPIC[™]Energy Performance Improvement Calculator

Looking to increase your project sales? LOOK NO FURTHER THAN EPIC™

EPIC empowers energy efficiency project professionals to estimate the energy savings and financial impacts of their projects in real time.

Proprietary data, predictive analytics and proven technology are based on thousands of energy performance improvement projects conducted nationwide over the past decade.

POWERFUL SOFTWARE FOR ENERGY PROJECTS

Estimate energy savings

Calculate financial impacts

Win more projects!

DESIGNED TO MEET KEY MARKET CHALLENGES

MARKET CHALLENGES

Contractors lack tools to estimate project energy savings and annual operating cost reductions for inclusion in their proposals.

Property owners, with information limited to replacement cost, often delay the decision to replace equipment that is beyond its useful life.

It is cost prohibitive for contractors to allocate "at-risk" skilled labor to develop a project that will deliver the highest return on investment.

SOLUTIONS

EPIC calculates the dollar value of energy savings from equipment upgrade scenarios, which can be appended to project proposals.

EPIC's project economics analysis provides owners with the information they need to make a fully informed, expedited investment decision.

EPIC automates cost-benefit analyses to cost-effectively determine the optimal improvements that maximize cash flow.

EPIC WORKS ANYWHERE

The EPIC app is cloud-based and can be accessed anywhere with an internet connection.

EPIC-generated reports appended to your proposal can transform an unwelcome capital expense to a compelling investment opportunity.

SCHEDULE A FREE DEMO

Schedule a personal walk-through with an EPIC product expert and see how energy efficiency professionals are using EPIC's proven methodology to:

- Integrate energy savings and financial impacts in project proposals
- Enter custom improvements that will support myriad project types
- Create, save, and compare different equipment scenarios to optimize your project based on key cost and savings impacts
- Provide property owners the data they need to confidently invest in energy improvements
- Win more projects!
